TTC Strengthens Engineering and Green Building Expertise

(Sept. 14, 2016) TTC is pleased to announce that Technical Program Manager Ben Bell-Walker recently passed the certification tests for the Fundamentals of Engineering (FE, formerly EIT) in Electrical Engineering and LEED Green Associate designations. The Fundamentals of Engineering exam is designed as the first step towards a PE or Professional Engineer certification. A LEED Green Associate credential enables the holder to pursue an advanced LEED AP (Accredited Professional) credential in areas such as Building Design and Construction or Operations and Maintenance. Ben Bell-Walker is a member of ASHRAE and has managed biomass codes and standards projects through TTC's client the Biomass Thermal Energy Council as well as TTC biomass consulting projects with USAID. These certifications enhance TTC's already robust technical expertise in renewable energy technologies.
